R_{stop}: largest radius $\geq r_1$ where expansion pays
Radius reached from the home
$(k/\kappa)\,\ell_s \ln \ell_s$, $k = 3$, $\kappa = 2$
Frontier radius (pc)
10^4
10^3
10^2
10^1
10^0
first step pays only
for $\ell_s > 7.75$ pc
nearest site, $r_1 = 1.30$ pc
10^0
10^1
10^2
Latency length $\ell_s = c/(\delta\omega)$ (pc)
