(a) Efficiency $a = \Xi\omega^{-\alpha}$
Discounted required price $g(\omega)/p$
Subjective clock ω
corner fails for $\alpha = 1$
price p
$\alpha = 0$
$\alpha = 0.5$
$\alpha = 1$
(b) Containment budget, $r_1 = 1.30$ pc
B_{lat} (solar luminosity-years)
Subjective constant $\delta\tau$
$T_{\text{rad}} = 300$ K
$T_{\text{rad}} = 1000$ K
one $L_\odot^{\text{N}}$ for one year
no-latency budget, 0.80
